

1. EXECUTIVE SUMMARY & PROBLEM STATEMENT

Urban PhonePe users currently rely on multiple separate tools to calculate, request, and track shared expenses such as rent, utilities, or dining. This fragmented process introduces significant coordination challenges, inaccurate balance tracking, and frequent delays in settlements for the initial payer (designated as the **Collector**). Consequently, this friction results in an inefficient group payment experience across the platform ecosystem.

2. JOBS-TO-BE-DONE (JTBD) FRAMEWORK

To analyze user motivations accurately, we frame the core user need through the Jobs-To-Be-Done lens:

"When I pay for a shared group expense, I want to calculate each **Member's** share, request repayments, and track outstanding balances in one place so that everyone can settle their dues accurately without repeated follow-ups."

3. BUSINESS CONTEXT & STRATEGIC OBJECTIVES

With an active user base exceeding **500 million users**, PhonePe observes a substantial and growing volume of shared expenses managed outside its app using messaging applications and third-party calculators. Capturing this behavior represents a strategic opportunity to streamline group expense settlements and increase transactional engagement within the ecosystem.

Primary Business Objectives

- **Simplify shared expense settlements:** Streamline group payouts and remove operational friction.
- **Reduce manual effort:** Automate complex calculations and tracking workflows.
- **Increase successful repayment transactions:** Drive higher transaction volumes and frequency through PhonePe.
- **Enhance the group payment experience:** Deliver a seamless, delightful journey for both Collectors and Members.

4. STAKEHOLDER ALIGNMENT MATRIX

Successful cross-functional execution requires alignment across key organizational stakeholders:

Stakeholder / Team	Alignment Goal & Responsibilities
Product	Deliver a simple, high-value bill-splitting experience that drives user engagement.
Engineering	Define a clear, scalable MVP scope prior to full technical development.
Design	Create an intuitive, low-friction repayment journey with minimal cognitive load.
Compliance	Ensure strict adherence to UPI regulations, data privacy, and transaction limits.

5. BUSINESS & PRODUCT REQUIREMENTS

Business Requirements (BR)

- **BR-1: Simplify shared expense settlements.** *Expected Outcome:* Reduce manual coordination and repayment effort for users.
- **BR-2: Improve repayment transparency.** *Expected Outcome:* Provide clear, real-time visibility into completed and pending repayments.
- **BR-3: Increase successful group payment settlements.** *Expected Outcome:* Drive higher volume of repayments completed natively within PhonePe.

Product Requirements (PR)

- **PR-1:** Enable the **Collector** to initiate and create bill splits seamlessly.
- **PR-2:** Automatically calculate each **Member's** proportionate share accurately.
- **PR-3:** Allow the **Collector** to dispatch payment requests to **Members** instantly.
- **PR-4:** Display real-time repayment status for each individual **Member**.
- **PR-5:** Maintain clear, transparent records of outstanding balances until fully settled.
- **PR-6:** Dispatch proactive notifications to **Members** regarding pending repayments.

6. USER STORIES & ACCEPTANCE CRITERIA

- **User Story 1 (Collector):** As a Collector, I want to split a shared expense and automatically calculate each Member's share so that I can request repayments accurately without manual calculations.
Acceptance Criteria: Enter total expense, add Members, auto-calculate shares, and review summary before sending requests.
- **User Story 2 (Member):** As a Member, I want to receive a repayment request showing the exact amount I owe so that I can settle my dues quickly and accurately.
Acceptance Criteria: Receive request, view owed amount, pay via PhonePe, and automatic status updates.
- **User Story 3 (Tracking):** As a Collector, I want to track each Member's repayment status so that I have complete visibility over who has paid and who still owes money.
Acceptance Criteria: Real-time status dashboard with Paid/Pending labels and automatic balance updates.

7. MVP SCOPE & MOSCOW PRIORITIZATION

To ensure rapid time-to-market while delivering robust utility, the feature scope is prioritized using the MoSCoW framework:

Category	Scope Details & Feature Allocation
Must Have (MVP)	Bill split creation, member addition, automatic share calculation, payment requests, repayment tracking, and outstanding balance management.
Should Have	Automated payment reminders and push notification alerts.
Could Have	Partial payment support for complex settlements.
Won't Have (v1)	Advanced expense analytics and recurring group templates.

8. RISKS, ASSUMPTIONS & DEPENDENCIES

Category	Analysis & Key Factors
Risks	Potential UPI transaction limits, regulatory compliance delays, and initial user adoption friction.
Assumptions	Active PhonePe user accounts, strong user preference for digital payments, and stable internet connectivity.
Dependencies	Core UPI infrastructure availability, push notification services, regulatory compliance approvals, and robust backend ledger engine.

9. SUCCESS METRICS (KPIS)

Product performance and feature adoption will be evaluated against a comprehensive dashboard of core metrics:

Adoption & Engagement KPIs	Financial & Settlement KPIs
• Bill Split Adoption Rate: Percentage of active users initiating bill splits.	• Settlement Completion Rate: Ratio of fully settled group bills.
• Monthly Active Bill Split Users: Volume of unique users interacting with split features.	• Average Settlement Time: Mean duration from split creation to full repayment.
	• Repayment Success Rate: Successful UPI repayment transactions completed.

10. STRATEGIC RECOMMENDATION & EXPECTED BUSINESS IMPACT

Recommendation: Launch the feature as a lean MVP focused strictly on the core settlement journey. Iterate rapidly based on user feedback, quantitative adoption metrics, and business priorities.

Expected Business Impact: Substantial reduction in manual user effort, enhanced financial transparency, accelerated settlement times, increased platform transaction volume, and an elevated overall group payment experience across the PhonePe ecosystem.
